

So, the deployment tracker has these parts

→ Dashboard

- ◆ Gives an overview of no. of accounts, customers, opportunities, pos, users in kpi cards
- ◆ Also shows a graph of no of opportunities division wise
 - Goes to the opportunities table counts no. of rows that have divisionid=1, divisionid=2, divisionid=3 and returns three counts which then get represented on the pie chart
- ◆ Shows the bar chart of no. of opportunities within each customer
 - Goes to the opportunities table counts no. of rows for each customer and returns the values to be represented as different bars
- ◆ Shows the bar chart of no. of opportunities within each account
 - Goes to the opportunities table counts no. of rows for each customer then goes to account id for each customer adds it up for each account and returns the values to be represented as different bars
- ◆ Products with the highest no. of opportunities
 - Goes to opportunities table then goes to opportunity details table and counts no of rows occupied by each product id and returns all counts to be represented as a pie chart
- ◆ Shows a log of users who updated data and a button to export this monthly data
 - Goes to createdat and updatedat column of each table that has a createdby column and lists all users that did activities in that month check createdat and updatedat column for time check.
- ◆ Shows a time series graph of no. of opportunities each month
 - Goes to opportunities table goes to createdat column and sums all opportunities within that month returns value for each month to be shown as line time series graph.

→ Accounts+Customer

- ◆ Shows kpi cards on top with no. of accounts, no. of customers and a button to export account customer mapping
- ◆ Displays all accounts names in a datatable with no. of customers and no. of opportunities within that account written on the side
- ◆ In a dropdown of each account shows customers names within that account and also shows no. of opportunities within that customer
- ◆ Add account option (opens a new page)
- ◆ Add customer option (opens a new page)

→ Opportunities

- ◆ Kpi cards on top with no. of total opportunities, initialized opportunities, ongoing opportunities and completed opportunities
- ◆ Filters to see opportunities based on accounts or customers and a button to clear filters and also a button to export the current filtered opportunities and opportunity details table data
- ◆ A button to add an opportunity

- ◆ Datatable with columns account, customer, oppname, oppnumber, startdate, enddate, totalvalue, status, no. of pos within that opp, no. of products, createdby displayed for each opportunity and a triangle at the end to see pos within that opportunity(drill down). The po rows show the columns product, opp quantity, po quantity, deployed balance displayed for each po within that opportunity. And at the end of these rows a progress bar that shows how much of the opportunities total quantity has been deployed as a percentage in progress bar. (each opportunity can have multiple products so another table opportunity_details tracks this by having different rows for different products and also opportunities_details table is now mapped to different pos also pos can also have multiple products and the details of the pos are, accordingly put in the po details table.)

→ POs

- ◆ Kpi cards with no. of total pos, ongoing pos, initialized pos, completed pos
- ◆ Filters to see pos based on opportunity, account, customer and a button to export the current filtered po data and a button to clear the filters.
- ◆ Add po button
- ◆ Datatable with columns showing account, customer, oppname, opp number, poname, po number, po quantity, actual qt(basically deployed), valid till(end date), completen percentage(measured according to deployed and total) and a triangle at the end which shows breakdown of the pos it lists the products(multiple rows if more than one product) the opp quantity of the product, the po quantity, deployed quantity and balance and an action button to track each stage of deployment of the product.
- ◆ (PO TRACKING PAGE)The action button opens up a new po tracking page for the designated product in that po. The page has the account name, customer name, opp name, opp number, po name, po number and product name on top in sort of a filter tab that can be changed from the filter dropdown to any po and any product in that po to track it, A clear filter button and a save changes button. Then it has a progress bar which indicates the different stages the po has achieved within that month (meaning that stage has actual quantity entered)and shows us the po progress as a timeline. Then below it, it has all the milestones listed and beside each milestone is a box for the user to fill the quantity he plans to do for that stage and just beside it is the box to fill the actual quantity. This tracking will be done on a monthly basis so the page has a button on top which shows month and year from the po start date to end date and for each of these month the milestone quantities can be filled.

→ Milestones

- ◆ This page when opened shows the page to add tracking for a po (so basically this page will allow you to start planning for a po it asks basic details to create the entries in milestone plans(1 for each quarter) for each milestone from the milestone (masters) table which then creates an automatic entries for each month in milestoneplan_details which then creates entries in milestone records table to track the planned and actual quantity for each stage)

- ◆ The page will have option to choose account, customer, opportunity, po and then product which need to be filled by the user. When clicked create it will take user to the tracking page of the product in that po.
- Challenges
 - ◆ Displays the challenges as a datatable. At the end of each row is a plan button which opens a form that asks details to make an entry in challenge_plans table
 - ◆ Add a challenge button which navigates to a page which asks for the details to put in challenge table.
- Products
 - ◆ Display all the division as a data table
 - ◆ each division has a drill down which when clicked on a division shows products under that division.
 - ◆ Add product button
- User
 - ◆ Shows all users and their access role with their details in a datatable with option to edit and delete the user
 - ◆ Add user button which asks to fill in details to create new user.
- Bulk Upload
 - ◆ Select section in which to upload the data (basically ask them to select a table provide them) when section is selected give them the option to download the template and have their data accordingly. Then they upload it and you just insert the data in that particular table.
